INDUSTRIES

- Temporary roadways & car parks
- Construction & civil engineering sites
- Events access & pedestrian walkways
- Heritage sites & eco friendly areas
- Landscaping & golf courses

TrakMats Europe joins Zigma Group

With effect from 1 July 2009 TrakMats Europe Ltd is pleased to announce that it is now part of the Zigma Group of companies, which includes our sister division Zigma Ground Solutions Ltd.

TrakMats Europe Ltd will continue to provide excellent service to all their customers.

Since launching TrakMats in 2005, TrakMats Europe has pioneered the widespread use and success of heavy duty, man handable access in the UK. TrakMats Europe has sold more TrakMats into Europe and the Middle East than any other supplier, and is recognised as the market leader of the man handable tem-

porary access industry. The Zigma Group, established in 2007, has built up a first class reputation for manufacturing and supply-

ing high performance, 'best in class' ground protection and access products to the UK, Europe and the Middle East.

The core philosophy of Zigma is to listen to their customers and deliver sustainable, recyclable, eco friendly and where possible, UK manufactured and de-

signed products and solutions. One of these exciting new products is the **EUROMAT**.

The EUROMAT, the first UK designed and manufactured compression moulded temporary access mat, provides maximum performance and capability at the best price of any temporary access mat in the industry today.

The combination of Zigma and TrakMats Europe heralds a new and exciting era in temporary ground protection and access in Europe and the Middle East, with plans underway to move into the US, Australia and Asia very shortly.

EUROMAT™ Made in the UK

EUROMAT, the latest innovation from Zigma, leads the way for fast deployment, temporary ground protection and access, providing safe movement of personnel and equipment over soft or sensitive ground. EuroMats are weight tested up to 80 tonnes

EuroMat Pedestrian, provides joint access for pedestrians and vehicles, incorporates a highly effective and safe non slip, non trip surface with optional reflective markings for night safety.

EuroMats are light enough for two men to handle, prevent vehicles getting bogged down and will significantly reduce damage to ground, including heritage and eco-sensitive areas. The special mud dispersal chevron traction is seen as

the most effective in the market and is ideal when the weather or ground conditions turn for the worse.

Unlike imported US mats, the EuroMat is truly symmetrical, allowing them to be deployed in all directions and designs for pads and turning areas.

COMING SOON: THE NEW SOLUTION IN LARGE HEAVY DUTY ROAD MAT - TUFFTRAK
